After receiving a Ph.D. in cognitive neuroscience from the Psychology Department at the University of California, Los Angeles, Dr. Uddin completed a postdoctoral fellowship at the Child Study Center at New York University. For several years she worked as a faculty member in Psychiatry at Stanford University before joining the Psychology Department at the University of Miami. Within a cognitive neuroscience framework, Dr. Uddin’s research combines functional connectivity analyses of resting-state functional magnetic resonance imaging data and structural connectivity analyses of diffusion tensor imaging data to examine the organization of large-scale brain networks supporting executive functions. Her current projects focus on understanding dynamic network interactions underlying cognitive inflexibility in neurodevelopmental disorders such as autism. Dr. Uddin’s work has been published in the Journal of Neuroscience, Cerebral Cortex, JAMA Psychiatry, Biological Psychiatry, PNAS, and Nature Reviews Neuroscience. She was awarded the Young Investigator award by the Organization for Human Brain Mapping in 2017.
